

BREAKER SHOP services

Our breaker shop offers decades of expertise in circuit breaker repair, upgrades, retrofits and much more.

Saber Power Field Services operates multiple, state-of-the-art breaker shops - staffed by highly skilled technicians with extensive experience servicing equipment from all major manufacturers.

Our team understands the specific testing, refurbishment, and compliance requirements associated with legacy and modern breaker platforms alike.

Service Capabilities:

- Reconditioning
- Remanufacturing
- Retrofits
- Maintenance Program
- Loaner/Rental Program
- Calibrations
- Replacement/Upgrade
- Pre-Commissioning
- Accessory Installation

Equipment Serviced:

- LV Molded Case Circuit Breakers
- LV Insulated Case Circuit Breakers
- Power Circuit Breakers
- LV and MV Motor Starters
- MCC Buckets
- Obsolete Breakers and Controls
- Reclosers

Reconditioning:

Reconditioning includes a complete teardown of the circuit breaker current path. Components are cleaned, inspected, lubricated, reassembled, and adjusted in accordance with OEM specifications. The operating mechanism is removed from the frame, thoroughly cleaned, and inspected. Bearings and bushings are cleaned, evaluated, and properly lubricated. All grease buildup and contaminants are removed to restore reliable mechanical operation.

Remanufacturing:

Remanufacturing involves a complete teardown of the entire circuit breaker, including the operating mechanism, current path, and control wiring. All hardware is nickel-plated, copper components are silver-plated, and the breaker frame is powder-coated to restore structural integrity and appearance. Upon completion, the breaker is returned to a condition comparable to a new factory unit. Remanufacturing represents our highest level of refurbishment service.

Retrofit and Life-Extension Services:

Modern retrofit technologies allow facilities to incorporate the performance and protection of state-of-the-art equipment at a fraction of full replacement cost.

- Low and medium-voltage circuit breakers
- High-pressure contact switches
- Starters and contactors
- Motor control centers (MCCs)
- Busway systems
- Medium-voltage disconnects
- Other electrical distribution equipment

Breaker Maintenance Program:

Saber Power Field Services assists customers with the ongoing responsibility of maintaining safe, reliable circuit breaker operation.

- Tracks each serviced breaker
- Notifies customers of manufacturer and/or NETA-recommended maintenance intervals
- Provides advance quotations for required service
- Fewer contractors onsite
- Reduced downtime
- Improved system reliability
- Simplified maintenance tracking
- Reduced administrative burden

AC-Pro® Retrofit Solutions (Low-Voltage Breakers):

AC-Pro retrofits enhance protection and safety while preserving existing switchgear infrastructure.

Key Advantages Include:

- Full protection coverage with no rating plugs required
- Non-volatile memory retention of the most recent trip data
- QUICK-TRIP™ functionality, which can be enabled or disabled without opening the cubicle door—reducing arc flash exposure during energized work

Breaker Shop Locations:
